Introduction

This document describes the content of the 1997 interview of the NLSY97 cohort. The Round 1 survey was conducted using three different questionnaires: the Screener, Household Roster, and Non-Resident Roster Questionnaire; the Parent Questionnaire; and the Youth Questionnaire. The Screener, Household Roster, and Non-Resident Roster Questionnaire was administered to a household resident over the age of 18. The Parent Questionnaire was administered to a parent or parent-like figure of the youth residing in the household. The Youth Questionnaire was administered to the youth respondent living in the household. The Screener and Parent Questionnaires are included in this document; the Youth Questionnaire is provided in a separate volume.

This survey was conducted entirely as a computer-assisted interview. Although some cases were done over the telephone, the dominant interview mode was the in-person interview, so we will use the term CAPI (computer-assisted personal interview) to refer to the data collection technology.

Our goal is to make the content of the interview as comprehensible as possible by producing a clear, complete, and compact questionnaire. With this in mind, the 1997 CAPI questionnaires have been formatted as similarly as possible to a conventional questionnaire. They also include some additional information that enhances the usefulness of each questionnaire for data users. The resulting documents accurately summarize the “conversation” between the interviewer and respondent. Suggestions for improving the questionnaire or comments on irregularity should be directed to CHRR User Services.

We use the term “conversation” to emphasize the difference between the questionnaire and the codebook. The codebook contains the data released as a result of the interview, but some information collected during the interview is not present in the codebook. For example, the questionnaire includes questions that collected names of household members, employers, etc. Such items are not released, so the questions that collect them are not present in the codebook. Conversely, the codebook contains some information not directly collected in the interview. For example, while created variables are documented in the codebook, there is no reference to them in the questionnaire as they are not part of the conversation between the interviewer and respondent.

To aid researchers in using the questionnaire, this introduction provides information on several topics. First, typical question blocks are described and key terms such as “R Number,” “Distribution Code Block,” and “Lead in Questions” are defined. This section explains how to follow the flow of the interview through the questionnaire. Second, the instrument compression techniques that have helped us to produce a compact questionnaire are described. Finally, this introductory section concludes with a discussion of save arrays, which provide interviewers with information specific to a given respondent (e.g., employer, name).
I. Types and Formats of Question Blocks

Question records are the building blocks of the CAPI questionnaires, with various types of records performing different data collection and/or manipulation functions. Loosely grouped, CAPI question records will either: (a) provide administrative information that assists the interviewer or provides an introduction to the next question, (b) provide question text and control for data entry of the response, or (c) perform internal operations and calculations to guide the interview and maintain the internal data storage during the interview. All question records essential to understanding either the content of the survey or the flow of respondents through the interview will appear within these 1997 NLSY97 questionnaires.

To aid users, the 1997 questionnaire contains some elements found in the 1997 NLSY97 codebook. For instance, codebook reference numbers are provided for question items and additional information such as universe skip patterns are included in each question block. Additionally, many of the elements not essential to understanding the conversational flow of the interview have been removed, making each question block less cluttered and easier to read.

Figure 1 shows the format of a typical question block; the various information fields are then explained in the following paragraphs.

Lead In(s):
Default Next Question:

Figure 1. CAPI Question Block

A. Question Name

Question names are designed to be the unique identifiers assigned to identical questions across survey years. The Screener Questionnaire has a two letter base before the number (e.g., SE-100). The first letter, S, indicates that this is a question from the Screener question group; the second letter indicates the subset of the Screener group. For example, SE-100 indicates that this is question number 100 in the Extended section of the Screener question group. The questionnaire is subdivided into the following sections: Extended Screener (SE), Household Screener (SH), Non-Resident Screener (SN), Parent Section (SP), and Information Sheet Collection (SZ).

The Parent Questionnaire has question names with bases varying from one letter and one or two numbers to four letters (e.g., PC8-100). Again, the first letter, P, indicates that this is a question from the Parent Questionnaire. This questionnaire is subdivided into the following sections: Information (PINF), Setup (PS), Family Background (P2), Parent Calendar (P3), Parent Health (P4), Income (P5), Self-Administered (P6), Child Calendars (PC8), Child Health (PC9), Child Income (PC10), Child Expectations (PC11), Child Family Background (PC12), Locator (PLOC), and Interviewer Remarks (PIR).

Each question in the Youth Questionnaire begins with the letter Y. The sections of this survey instrument are detailed
in the introduction to that survey volume.

**B. R Number**
The NLSY97 identifies the variables by reference numbers (R numbers). The identifier for a particular variable in a particular year does not change, even as new waves are released. The R number has the format Rxxxxx. Every question in the questionnaire which appears in the codebook has its reference number printed next to it as an identification. This allows the user to identify immediately which items he or she will be able to extract from the CD and to find a given question on the CD with a minimum amount of effort. Any item that is not in the public use data set will not have an R number in this questionnaire; these items are identified by question name only.

Most questions generate a single variable in the codebook; some, however, will generate more than one variable. For example, some questions collect information about the date an event happened and split this information into three separate variables: month, day, and year. Some questions offer a respondent several answers to choose from with the instruction to choose all that apply, generating a great many variables. In these questions, each possible outcome is a distinct variable, coded as “selected,” “not selected,” or “valid skip.”

**C. Question Text**
This field contains the text of the question that the interviewer asked the respondent or other information used to direct the flow of the interview. The following types of text may appear:

- **Question Text:** Text that is asked of the respondent appears in a conventional mixture of upper and lowercase letters.
- **INTERVIEWER:** Text in all uppercase is either an instruction to the interviewer or a clarifying comment. NORC interviewers do not read these items to the respondent.
- **COMMENTS:** Internal Code: When a question record contains a machine instruction, that instruction is printed in this field. Such instructions end with a semi-colon. These instructions are accompanied by internal comments as described below.
- **/* comments */** Internal comments that explain what a machine instruction does are set off by a leading “/” and a trailing “/.” These comments explain the function being performed by the internal code so that persons unfamiliar with the command system can follow the interview protocol.

**D. Distribution Code Block**
When a question requires the choice of one or more items from a predefined list, that list, or distribution code block, is shown in the question block. Each item in the distribution code block has three components:

- **Code:** The numeric code associated with each possible response is listed first. All data in the NLSY97 public use data file are numeric, so each possible item that could be selected is associated with an integer.
- **Text:** Next is the item text or description of the code, such as “Yes” or “No.” If the question uses a “show card” (this will be indicated in the question text field), the items on the show card are sometimes identified by letters or numbers; these letters or numbers are included with the response text in this questionnaire.
- **Skip:** When the selection of a specific response determines which question will be asked next, a (GO TO Rxxxxx) or (GO TO YSCH-nn) notation follows the response text.
For some questions that collect numeric data (hours, weeks, dollar amounts, etc.), the question block contains what appears to be a distribution code block. This is present whenever the next question to be asked depends upon the numeric value falling in some range. In such cases the distribution code block is constructed so it corresponds to these skip conditions. However, the interviewer would actually enter the exact number provided by the respondent and this exact number would be recorded in the data set.

E. Lead in Questions
The CAPI questionnaires include a “Lead in(s)” field in the question block. The field lists the questions that lead into each particular item. By tracing the skip pattern backward, the user is able to determine the universe of respondents asked a given question. Examples:

- YSCH-1200 [Default] This means that the default path from question YSCH-1200 leads to the current question, but there may be conditions under which a different path would be taken.

- YSCH-1200 [1:4] This means that whenever the response category for question YSCH-1200 takes on the values one to four (inclusive), the next question will be the current question record. If the response is some other value, the respondent may next be asked a different question.

F. Default Next Question
This field specifies the question to be asked next unless another skip specification in the distribution code block applies.
II. Instrument Compression

In order to provide a more compact questionnaire, two types of records have been dropped. The following do not appear within this questionnaire: (1) “looped” questions or repetitive series and (2) question records that perform internal operations not necessary for understanding the conversational flow of the survey.

First, repetitions of questions that asked multiple times are not included. Questions appearing in loops will be enclosed inside a special type of question called a REPEAT command, which begins a loop, and the UNTIL command, which will end the loop. For example, the CAPI instrument asks questions about the education, employment, etc., for up to twenty persons in the household. Instead of printing all twenty sets of questions, only the questions for the first person are printed.

Second, the instrument was compressed by eliminating question records that contained only nonessential skip pattern information. The 1997 CAPI instrument included 6,659 numbered question records (Screener 1,115; Parent 525; and Youth 4,019), only some of which are essential to understanding the action content and conversational flow of the survey. The process of dropping unessential records and then changing the lead in and next question specifications so that the skip pattern does not have any gaps is referred to as “skip pattern compression.” The resulting questionnaire still contains all relevant information about skip patterns and universes and is easier for researchers to use.

Note: All questions that were part of the original questionnaire and appear as variables on the Round 1 CD have been included in this questionnaire, even those questions that perform internal operations with no skip pattern implications.
III. **Save Array**

“Save arrays” are fields in which information is stored. Each such field, or save array, is assigned a name. For example, the name of the respondent’s current employer would be stored in the “EMPLOYER.NAME(1)” save array for use during the interview. This “save array name” is then used to reference and access the data in the save array field during the actual operation of the survey. Each time a question refers to the current employer, the computer automatically inserts the name of the employer into the question. Information stored in save arrays is used:

a) as part of the actual text of survey questions (e.g., the name of a given household member, child, employer, types of training programs, different sources of income for household members);

b) to govern paths through the questionnaire. The save array field is accessed, and the content (or absence of content) is checked. The path through the questionnaire is determined based upon the information in the save array field; and

c) as elements in equations and calculations. These produce new pieces of information that may be incorporated later in the instrument.

When used in a question text, save arrays are similar to the text fills used in PAPI interviews (a paper and pencil interviewing method used in previous NLS age cohort studies). These text fills indicated that the interviewer should substitute a given word or phrase into the question at the time of the interview so it read correctly. For example, in a printed PAPI questionnaire one would often see “Since (DATE OF LAST INTERVIEW) have you...”; this phrase would instruct the interviewer to insert the actual date for a given respondent. However, correctly inserting such text fills was the job of the interviewer and often involved flipping between pages.

One immediate difference in the CAPI questionnaires is that there are far more text fills, and most of them are automated or handled by the computer. Some CAPI text fills are identical to those used in the PAPI interviews, such as “he/she” to handle gender fills. For date-related text fills, the system substitutes a previously supplied date for the descriptive text specifying which date is needed.

In this questionnaire, text fills that refer to a save array are represented by bracketed text describing what piece of information is substituted in the interview. Although the interviewer never sees this bracketed text, researchers can use that information to follow the flow of the interview.

Here is a short list of common terms used in the Screener save arrays that require a brief definition.

a) Household Roster 1—This is the original unsorted roster of every person living in the household. This roster was created in question SE-5.

b) Household Roster 2—This is a sorted roster of all people living in the household. After at least one person living in the household was identified as an eligible sample member for the NLSY97, the original household roster was sorted primarily by eligibility status and secondarily by age. That is, the persons eligible for the NLSY97 are moved to the top of this roster, sorted by age (in descending order), followed by all non-eligible members, who are also sorted by age.

c) Household Roster 3—This is a roster of NLSY97 sample members only, sorted by age.

d) DOLEL and REVDOLEL—These terms refer to eligibility status for the NLSY97, or Department of Labor, study. DOLEL is a preliminary eligibility variable; REVDOLEL is a final eligibility variable. If the value of REVDOLEL is 1, the person is eligible for the NLSY97 survey.

e) ETPEL and REVETPEL—These terms refer to eligibility status for the CAT-ASVAB study, sponsored by the Department of Defense. ETPEL is a preliminary eligibility variable; REVETPEL is a final eligibility variable. If the value of REVETPEL is 1, the person is eligible for the CAT-ASVAB study.

f) STPEL and REVSTPEL—These terms refer to eligibility status for another sample for the CAT-
ASVAB study. STPEL is a preliminary eligibility variable; REVSTPEL is a final eligibility variable. If the value of REVSTPEL is 1, the person is eligible for the CAT-ASVAB study.

For a more complete discussion of the samples collected in the Screener, Household Roster, and Non-Resident Roster Questionnaire, please consult the NLSY97 User’s Guide.
NLSY97 Round 1
Screener, Household Roster, and
Non-Resident Roster Questionnaire
[SE-1]

DATE OF SCREENER INTERVIEW

Lead In: None.
Default Next Question: SE-3

[SE-3]

Now, before I start the interview, I'd like to tell you some important information about this study. This study is sponsored by the U. S. Department of Labor, Bureau of Labor Statistics, under authority of Title 29 USC 2. Your participation is vital to the success of the study and is voluntary. This survey is conducted to understand the labor market experience of young adults. This information will be used by BLS and other researchers. The information you provide is protected under the Privacy Act. Personal identifiers (e.g., name, address, or social security number) will be held in confidence and will not be released to the public.

Lead In: SE-1 [Default]
Default Next Question: SE-4

[SE-4]

First, I'd like to do a 3 minute interview to determine if any persons in this household are eligible for the survey. Let's begin by asking a few questions about the people who usually reside in this household, including persons:

- who are away at school or college
- lodgers, boarders, or persons in your employ who live here
- any others who usually live here but are away at present, such as someone traveling, or someone in a hospital, correctional facility or any other type of institution
- any others who are staying here such as foster children
- and any babies or small children.

Lead In: SE-3 [Default]
Default Next Question: SE-5

[SE-5]

Could you tell me the names of the people who usually live here, beginning with the eldest? (INTERVIEWER: ENTER NAMES OF ALL HOUSEHOLD MEMBERS PROVIDED BY INFORMANT (NICKNAMES OR INITIALS CAN BE USED). What is the (your/next person's) name?)

NAME: ______________________

Lead In: SE-4 [Default]
Default Next Question: SE-6

[SE-6]  R07367.00

Have I missed anyone?

1 Yes  (Go To SE-7)

0 No

Lead In: SE-5 [Default]
Default Next Question: SE-9

[SE-7]

What is the (your/next person's) name?  (INTERVIEWER: ENTER NAMES OF ALL ADDITIONAL HOUSEHOLD MEMBERS PROVIDED BY INFORMANT (NICKNAMES OR INITIALS CAN BE USED).)

NAME: ______________________
INTERVIEWER: SELECT THE LINE OF THE ROSTER WHICH LISTS THE INFORMANT.

INTERVIEWER: YOU HAVE CHOSEN [name of informant] AS THE INFORMANT OF THIS INTERVIEW. IF THIS IS NOT CORRECT, PLEASE RETURN TO THE PREVIOUS QUESTION AND RESELECT A PERSON FROM THE ROSTER.

Now I would like to ask you about the ages of the people you just mentioned.

Now I would like to ask you about the ages of the people you just mentioned.

/* transfer out the names from the roster to the save array */

REPEAT ([loop number 1]); /* Start looping through the lines on the roster */

What is [(your/[NAME]'s)] date of birth? ENTER MONTH ___ ENTER DAY ___ ENTER YEAR ___
ISCOMPLETE ([original date of birth of person on household roster 1]);

Parent Questionnaire
INFORMATION

This study is sponsored by the U.S. Department of Labor, Bureau of Labor Statistics, under authority of Title 29 USC 2. Your participation is vital to the success of the study and is voluntary. The survey is conducted to understand the labor market experience of young adults. The information will be used by BLS and other researchers. The information you provide is protected under the Privacy Act. Personal identifiers (e.g., name, address, or Social Security number) will be held in confidence and will not be released to the public.

The Bureau of Labor Statistics estimates THAT IT WILL TAKE AN AVERAGE OF 60 MINUTES PER RESPONDENT to complete this survey. If you have any comments regarding this estimate or any other aspect of the survey including suggestions for reducing the time needed to respond, you may send them to the Bureau of Labor Statistics, National Longitudinal Survey (OMB No. 1220-0157, Exp. 8-31-98) 2 Massachusetts Ave., N.E., Washington, DC 20212.

Default Next Question: P3-001
Now I’d like to find out a little about your life history. In this section we are especially interested in your work and marriage history. Since this survey is mainly concerned with your child(ren) who will be in our study, we’ll concentrate on events which have happened since (his/her/their) birth(s). Later in the interview, we will talk more specifically about events your child(ren)’s (life/lives) such as living arrangements.

In order to keep all the dates straight, most people find it easier if they have a calendar. I’m going to give you this calendar after I mark a few significant events on it. We find that people are often better at recalling the dates of events if they think of them in relation to important milestones in their lives such as the date of their marriage or the birthdates of their children.

As you can see, this calendar has months across the top and years down the side. Each month of a particular year is represented by a box. You can fill any box with anything you would like that will help you remember what was happening in your life around that time. Let me start by entering the birth dates of the children who will be in our study.

INTERVIEWER: ENTER THE BIRTHS OF ALL SAMPLE KIDS IN THE APPROPRIATE MONTHS. LABEL EACH SUCH AS 'Betty's Birth.'

I will also enter the date of your 18th birthday, [date parent turned 18]. We will be talking about your employment
history starting with this date.
INTERVIEWER: ENTER [date parent turned 18] ON CALENDAR AND LABEL '18th Birthday.'

Lead In: P3-033a[1:1]
Default Next Question: P3-036

[P3-036]
INTERVIEWER: HAND CALENDAR AND PENCIL TO RESPONDENT. Here is the calendar. Feel free to refer to
it as much or as little as you want and to put anything on it that you think will be useful. We've noticed that people
often find it especially useful when talking about their employment history and that of their spouse, residential moves,
and the schooling and living arrangements of their children. As we go along, I will suggest certain dates you may want
to put on the calendar but you can use it as often as you see fit.

(PC11-002)

(HAND CARD Q) Each of the next set of questions will ask you for your best guess at the chance that something will happen in the future. You can think of the PERCENT CHANCE that some event will occur as the number of CHANCES OUT OF 100 that the event will take place. If you think that something is impossible, you would give it a 0 percent chance; if you think it is certain to happen, give it a 100 percent chance. For things that are possible but unlikely, or likely but not certain, assign them numbers in between 0 and 100. Just to make sure you're comfortable with this scale, I'd like you to do a practice question, and I'd like you to explain your answer to me and to make an "X" on this scale that corresponds to your answers. INTERVIEWER: SHOW RESPONDENT CARD $$$ (PERCENT CHANCE SCALE WITH HASHMARKS) AND ASK PRACTICE QUESTION.

Lead In: PC11-001[1:1]
