

APPENDIX 23

GEOMETRIC PROGRESSION

APPENDIX 23 (5/96)

Re: Geometric Progression Coding

Multiple entry or "mark all that apply" questions are typically found in the fringe benefit, job search, and health section of the questionnaires. Starting with the 1992 Mature Women these questions will no longer be coded as geometric progressions, instead they will be coded as dichotomous or True/False variables. Most variable titles will remain identical with previous years with only an appended number indicating the different response item. Some will be changed slightly so that the coding category can become part of the title. The first time a question is coded as a series of dichotomous variables a note is added which states "THIS ITEM PREVIOUSLY CODED AS A GEOMETRIC PROGRESSION." The questions listed below are coded as geometric progressions and need to be "unpacked" as a series of dichotomous variables before they can be used. After the listing of titles is a copy of the instructions on "How to Unpack Multiple Entries in the Original Cohort Data Set" which is from an appendix in the Users Guide.

- R 1647.00 WHICH OF THE FOLLOWING HEALTH CONDITIONS DOES R EXPERIENCE AS A PROBLEM? 71
- R 1648.00 WHICH OF THE FOLLOWING WORKING CONDITIONS CAUSE R A HEALTH PROBLEM? 71
- R 2400.00 METHOD OF SEEKING EMPLOYMENT TO BE USED IN NEXT YEAR (OLF 72)

 R 9558.00 WHICH FAMILY MEMBER HAS HEALTH PROBLEM THAT LIMITS WORK R CAN DO? 89
 R 9574.00 PERSON WHO HELPS R W/ SHOPPING DUE TO HEALTH PROBLEMS, 89
 R 9583.00 PERSON WHO HELPS R W/ MANAGING OWN MONEY DUE TO HEALTH PROBLEMS, 89
 R 9592.00 PERSON WHO HELPS R W/ LIGHT HOUSEKEEPING DUE TO HEALTH PROBLEMS, 89
 R 9601.00 PERSON WHO HELPS R W/ HEAVY HOUSEKEEPING DUE TO HEALTH PROBLEMS, 89
 R 9940.00 MOVE TO CURRENT RESIDENCE - REASON LEFT PRIOR RESIDENCE, 89
 R 9957.00 WHO USUALLY PROVIDES HELP CARING FOR R'S PARENTS BECAUSE OF HEALTH REASONS? 89
 R 9968.00 WHO USUALLY PROVIDES HELP CARING FOR HUSBAND 'S PARENTS BECAUSE OF HEALTH? 89
 R10013.00 METHOD OF SEEKING EMPLOYMENT DURING PAST FOUR WEEKS (UNEMPLOYED 89)

Appendix E

Unpacking multiple entries in the Original Cohort data sets

Responses to multiple entry questions found in surveys of the four Original Cohorts are coded in a geometric progression to conserve space on the tape. Variables such as 'Method of Seeking Employment', 'Method of Finding Current or Last Job', 'Type of Financial Aid Received', 'Type of Child Care Arrangement', and numerous health-related questions have been formatted in this way since the surveys began. Multiple entry items are identified by an asterisk under the source code box in the questionnaire and by a special detailed codeblock in the documentation.

Example: Codes for the variable, Reference # 4561. 'Fringe Benefits Made Available to R by Current Employer, 1976 (mark all that apply)', range from 1 (the respondent reported only one such benefit, "medical insurance") to 259 (the respondent reported "medical insurance", "life insurance", and "paid sick leave") to 1023 (the respondent reported that s/he had access to all of the benefits listed). Solution: Although there are several different ways to sort out which respondent has positive answers on which components, the following provides one such approach. Todd Idson and Bill LeBlanc, in their work on employer size and turnover based on data from the NLS of Young Men, wrote the following SAS program

to "unpack" or create dichotomous "yes-no" variables from such fringe benefit data. The program statements listed below can be modified by the user to include the expanded set of fringe benefits available in later survey years as well as to unpack other multiple entry variables by extending the dummy, the counter, and the number of variables to agree with total number of responses listed in the codeblock in the documentation. This program assumes an unedited NLS tape in fixed format.

This SAS program unpacks fringe benefits from the variable "fringe". It creates 10 (dichotomous) dummy variables indicating the presence or absence of each of the 10 benefits. Each dummy is set to missing if fringe is missing (coded at -999). Note that the variables are created in reverse order from the codeblock, i.e., MEDICAL is code 1 on the tape and FRINGE10 in the program.
