

APPENDIX 1

Specific fields of study in college are not coded separately on the NLS tape, but are grouped into major categories. Moreover, in designating the major categories and in assigning individual fields to each, three different classification schemes were used: one for the 1966 survey of young men, another for all subsequent surveys of the young men, and still a third for all of the surveys of the young women. This appendix shows the major categories and their specific components, under each of these three classification schemes. In Part I, the major categories are shown in the left hand column and the component fields under each of the three classification systems are listed in the remaining three columns. In Part II, the specific fields are listed alphabetically in the left hand column and the major category to which each was assigned are shown in the three columns to the right.
