NEW GEOGRAPHIC AND ENVIRONMENTAL VARIABLES FOR THE MATURE WOMEN'S COHORT, 1967 to 1977

NOTE: While in most instances the geographic information on this tape should be consistent with the original geographic information, there are sufficient instances where this will not be true. Thus, this information should be considered as replacing all earlier geographic information. In addition, in order to expedite the availability of these data to the public, we are releasing the data before we have completely verified their quality.

General Explanation of all of the Residence Comparison Variables

All of the comparison of state, county and S.M.S.A. variables are constructed as follows. The 1967 state, county and S.M.S.A. of residence is coded "1" for everyone. If they live in that same state, county or S.M.S.A. in any subsequent year, they are also coded "1" in that year. If they move to a second location, they are then coded "2" at that second location. If they move to a third location in a subsequent year they are then coded "3" and so on. Of course, any time they move back to a prior location their location code reverts to what it had been at that time. As an example, if a respondent changes her county or residence between 1967 and 1968, then moved back to her original county in 1969, moves to a new county in 1971, moves back to her 1968 county in 1972, remains in that county through 1976, and then moves to a new county in 1977, her county of residence codes for each year would be as follows:

1967	1
1968	2
1969	1
1971	3
1972	2
1974	2
1976	2
1977	4
