

## How do I obtain NLS data?

NLS data are made available to researchers through Investigator ([www.nlsinfo.org/investigator](http://www.nlsinfo.org/investigator)). Investigator allows users to search for variables of interest for any NLS cohort, create simple tabulations of the data, extract data files for analysis, and access documentation. NLS public data are immediately available and free of charge. See below for information on obtaining restricted-access NLS data such as the geocoded files.

## Where do I get more information?

Visit the NLS website ([www.bls.gov/nls/](http://www.bls.gov/nls/)) for online access to questionnaires and other documentation, a searchable, annotated bibliography of NLS research, news releases, updates, information on obtaining restricted-access data, and much more.

Questions about NLS data should be directed to NLS User Services: [usersvc@chrr.osu.edu](mailto:usersvc@chrr.osu.edu) or 614-442-7366.

Questions about BLS publications and restricted-access NLS data should be directed to [NLS\\_info@bls.gov](mailto:NLS_info@bls.gov) or 202-691-7410.

The National Longitudinal Surveys are sponsored by the Bureau of Labor Statistics (BLS) with data collection and user services provided, under contract, by the Center for Human Resource Research (CHRR) at The Ohio State University and NORC at the University of Chicago. Funding for the NLSY79 Child/Young Adult survey is provided by the Eunice Kennedy Shriver National Institute of Child Health and Human Development.

# NLS of Young Women Fact Sheet

## What are the National Longitudinal Surveys?

The National Longitudinal Surveys (NLS) are a set of surveys sponsored by the Bureau of Labor Statistics (BLS) of the U.S. Department of Labor. These surveys have gathered information at multiple points in time on the labor market experiences and other significant life events of several groups of men and women. Each of the NLS samples consists of several thousand individuals, many of whom have been surveyed over several decades.

## What is the National Longitudinal Survey of Young Women?

The NLS of Young Women is a sample of 5,159 women who were ages 14 to 24 in 1968. The survey is one of four original groups first interviewed when the NLS program began in the mid-1960s. The U.S. Department of Labor selected the Young Women cohort to enable research on the employment patterns of women who were finishing school, making initial career decisions, and starting families. Data are available for this cohort from 1968 through 2003, when the survey was discontinued. The survey covers a variety of topics, including:

- characteristics of jobs
- labor market status
- education
- health and physical condition
- marital and family characteristics
- income and assets
- attitudes and perspectives
- retirement
- environmental characteristics
- transfers of time and money

The survey also has included questions on topics specific to the life stage of respondents, such as educational experiences and plans in the earlier years of the survey, childcare issues and fertility expectations a few years later, and health, pension, and retirement information in later interviews. The most recent addition to the Young Women questionnaire asks about transfers of time and money between respondents, their parents, and their children.

## How was the sample designed?

The U.S. Census Bureau, which conducted the survey for BLS, designed the samples of the four original NLS cohorts so that any given household could include multiple respondents from the same cohort or from different cohorts. Variables present in the data files identify the respondents who lived in a multiple-respondent household at the time the samples were selected. These relationships offer unique samples for a number of research topics. For example, data collected from mother-daughter pairs in the NLS of Young Women and the NLS of Mature Women allow researchers to examine transfers of time and money from the perspective of both the mothers and the daughters.

**Sample sizes by race for selected surveys: NLS of Young Women**

	1968 (initial survey)	1978	1988	1997	2003 (final survey)
Total	5,159	3,902	3,508	3,049	2,857
Nonblack	3,700	2,838	2,628	2,287	2,113
Black	1,459	1,064	880	762	744

## Cohorts in the National Longitudinal Surveys

### NLSY97

-women and men ages 12-16  
as of December 31, 1996

### NLSY79

-women and men ages 14-21  
as of December 31, 1978

### NLSY79 Child and Young Adult

-children born to women of  
the NLSY79

### NLS of Older Men

-men ages 45-59 in 1966  
(discontinued after 1990)

### NLS of Young Men

-men ages 14-24 in 1966  
(discontinued after 1981)

### NLS of Mature Women

-women ages 30-44 in 1967  
(discontinued after 2003)

### NLS of Young Women

-women ages 14-24 in 1968  
(discontinued after 2003)
